Biplanar™ 500e

Dual View Surgical Imaging without Compromise

Biplanar 500e

MADE IN SWEDEN
www.biplanar.se

The Biplanar™ 500e fully meets the requirements of orthopaedic, trauma and spinal surgery.

The Biplanar™ is the world's only true Dual View Surgical Imaging solution.

It performs simultaneous fluoroscopy in two orthogonal planes with seamless integration into your workflow.

With a simple tap on the foot control, you are able to see both AP and lateral views without any need for rotation or repositioning – highly desirable in trauma surgery and key in spinal surgery.

When using the Biplanar™ you can focus fully on your work without undesired interruptions. This results in shorter operating time, significant dose savings and reduced infection risks.

With the option of the Biplanar™ 500e, operations in spinal surgery can benefit from our technology.

The Biplanar™ 500e is the latest model of Swemacimaging's™ original dual view imaging solution, which was the world's first mobile G-arm introduced in 1974.

More than 1,000 surgeons operate regularly on hips, tibias, knees, and spines using the Biplanar™. Over 100,000 in-terventions are performed annually worldwide.

Overall, more than two million surgeries have been performed in more than 18 countries since the introduction of the Biplanar™.

For more information about the Biplanar™ 500e, please contact our product specialists.

The Biplanar™ has been developed to fully adapt to the idea of mobile fluoroscopy to the best operating workflow

Prof. Dr. Karl-Göran Thorngren
Professor of Orthopaedic Surgery

I strongly recommend using the Biplanar™ for orthopaedic and trauma surgery. The advantages are huge – both from the perspectives of handling and medical quality, which result in economic gains.

For more information about the Biplanar™ please contact our product specialists.
